Re: Notes from 5/19/97 Impact Analysis Team Leaders Meeting

Wendy Halverson-Martin distributed copies of the Alternatives Analysis Appendices.

Wendy and Rick explained the Impact Analysis Matrix they are developing. The theory is that each impact analysis module that is being developed will only need to be done once then placed into the matrix as appropriate. Modules will cover both physical and operational issues.

A consultant stop work order was issued Thursday PM and rescinded Friday AM.

Frank Piccola will need status briefing notes (1 page write-up) from each team leader for the June 11 and July 16 PCT meetings.

Dates for deliverables -

- July 1 for internal review

 - 100% complete Affected Environment Reports

 - 80% complete Impact Analysis Reports (with holes identified)

- July 7 Comments incorporated

- July 9 Documents to printer

Ecosystem team asked for information on water quality footprints. They were not in "footprint" report. Bellory asked that the "footprint" document be given a reference name so that it could be referred to. A listing of the correct versions of documents the teams should be using was requested. If teams have made any changes to the "footprint" list Rick Britenbach should be notified.

The water quality group needs to look at the water quality footprints that were developed and analyze their applicability and decide which are appropriate for use. A meeting should be arranged between the storage & conveyance, ecosystem and water quality teams to decide how salinity will be addressed.

The storage and conveyance team said their is still confusion over what will or is being modeled. Retooling of the models for third party operation is an issue.

Reports are available on seismicity and levee borrow materials.
